

2018 Norfolk Broads Tide Timetable and Information

The Broads rivers are tidal, rising and falling in roughly 25 hours. Generally the outgoing tide (the 'ebb') lasts longer than the incoming tide (the 'flood'). The tidal effect is most noticeable near Gt Yarmouth, where the Broads flow out into the sea, and here the tidal rise and fall can be up to 2 metres (6.5ft).

It saves time, fuel and makes less wash to go with the tide, not against it. There are several bridges around the Broads which can slow progress if the tide is very high. Slack water (when the current is still at the change of tides) occurs about 1 hour after the times given.

Relative Low Water Times

Approximate low water times can easily be calculated for other locations around the broads by adding on the hours given in the list, to the low water times at Great Yarmouth Yacht Station.

Acle	2.5 Hours Later	Oulton Broad	3 Hours Later
Becoles	3 Hours Later	Potter Heigham	3 Hours Later
Brundall	3 Hours Later	Reedham	1.5 Hours Later
Horning	3 Hours Later	St Olaves	1.5 Hours Later
Loddon	2.5 Hours Later	Stalham	4 Hours Later
Ludham Bridge	3 Hours Later	Wroxham	3.5 Hours Later
Norwich	3.5 Hours Later		

The times stated below are approximate. Tides are affected by weather and wind conditions. Cruising during darkness is forbidden. You must plan your journey so as to be moored 1 hour before sunset.
